Branded Portal Using Proprietary 2-Factor Authentication
Daily Back-ups

MY SecureLink

MY Secure Link
A Secured File Portal to Your World

Business runs on information being shared between parties – clients, customer, vendors, and partners. The good news is more information than ever can be sent via the internet for effective and efficient transfer of documentation and data. However, concerns regarding data security and a secure IT Cloud Environment are still the #1 issue on people's minds. We have all read about situations where large corporations and even government agencies have had encrypted data and documents stolen by sophisticated hackers. Nothing is 100% secure, but MY Secure Link is the only File Sharing solution to use 2-Factor Authentication providing a strong security layer in addition to encryption.

Does your business send or receive sensitive files with credit card information, social security numbers, financial accounts/information, or other company confidential information? If so, MY Secure Link provides your business with a secured file portal that shows you are taking Data Privacy to the Next Level – a powerful message to the market.

How can MY Secure Link help your business?

➢ *Branded Portal* – Your own unique internet portal access using your business logo, colors, URL, and name to ensure your company receives high visibility to drive brand recognition.

➢ *Accessible from Any Device and Any Platform* – Documents can be sent and received from any device (smart phone, tablet or laptop), on any platform (Apple, Microsoft, Google, Kindle, etc.), and accessible from anywhere there is an internet connection. Providing easy accessibility always strengthens a close partnership.

➢ *Hosted Solution* – MY TrueCloud manages the entire 100% Cloud solution in multiple secure sites using our proprietary SSL/VPN Tunneling architecture in conjunction with our proprietary Invisible Cloud Token technology. Simply put, you are in very safe hands because we pride ourselves in being experts in secured hosted environments. We provide you peace of mind so you can focus on growing your business. No other file share provider can provide this level of expertise and security.

➢ *Daily Backup* – The comfort in knowing that if a document is lost for whatever reason it can quickly be recovered from your MTC archive.

➢ *Casual User* – Making your business more effective and efficient drives growth, profitability, and customer satisfaction. MTC provides a low-cost Casual User option that allows a business to encourage your clients, customers, vendors, and partners to use your secure file portal. As a business, you can provide this service (building good-will) or pass on the cost - your choice.

One definition of "link" is "a relationship between 2 parties where one affects the other". When you send and receive files, it is critical that your internet link is as secure as possible because all parties can be severely impacted (financially, legally, and morally) if data privacy is breached. In business, your reputation, integrity, and commitment to those who work with you are paramount, and having MY Secure Link provides the assurance you have not taken that commitment lightly!

File sharing in some form has been around for years and continues to evolve with the new technology. MY TrueCloud is a technology innovator determined to provide the most robust and scalable solutions on the market. MY Secure Link incorporates advanced file sharing technology that is integrated into one simple-to-use, yet powerful solution. The goal is to make it as easy as drag and drop, but have all of the processes and controls in place to ensure files are delivered, viewed, and downloaded by the authorized person. Businesses need to have the ability to confidently receive and send files regardless of size, location, type, or device. Those are barriers your business will not encounter with MY Secure Link.

"MY Secure Link is the only File Sharing Solution to use 2-Factor Authentication Security when Encryption is not enough."

What features make MY Secure Link the leading file share solution?

➢ *Advanced Security* - MTC's proprietary 2-Factor Authentication technology ("Invisible Cloud Token") turns a device's browser into a One-Time Password virtual token. Easy for anyone to manage the additional 2-Factor Security with Encryption.

➢ *No Boundaries* - No file size or file type limitations (e.g. email, files, and pictures).

➢ *Multi-Sync* - Sync files to special folders and sync folders to specific computers and people for seamless collaboration.

➢ *Advanced Permission Setting* - Allow establishment of individual resource access criteria to specific folders and accounts.

➢ *Advanced Forensic Monitoring* – Real-time tracking on all activities and versioning on all documents. Retain unlimited version history.

➢ *Public API* – Ability to easily connect with any legacy system to maximize existing IT infrastructure resulting in lower deployment costs.

➢ *Instant Notification* – Sender and Receiver of files are instantly notified via a chosen device that files have transferred to MY Secure Link which improves productivity.

➢ *Google and Outlook Integration* – Email sync to upload and retain important communication.

MY Secure Link provides a strong foundation for a small to medium size business looking for innovative ways to become more collaborative and efficient. Our solution can be in production in a few days. MY TrueCloud believes we need to prove ourselves every day, so our customers may sign a month-to-month agreement. MY Secure Link integrates with MY TrueCloud's document management system, so when that level of functionality is needed, you have the comfort knowing you have a partner that can grow with you.
